

*Looking For A Better Way to
File Your Paperwork?*

Simple, Easy, Done

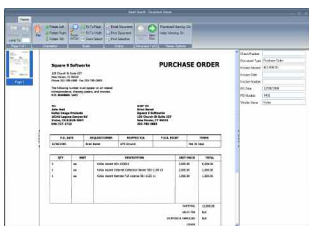

SmartSearch® - Software proven to make your business more efficient and profitable.

For years, only businesses fortunate enough to have large technology budgets were able to reap the benefits that came from document management. Advantages like increased information access, lower operating costs and reduced file storage requirements are just a few of the rewards these companies enjoyed. This efficiency led to more profitable organizations that weren't drowning in an endless sea of paper but it also came at a price that only a few could afford.

All that has changed thanks to Square 9 Softworks, the creators of SmartSearch, the first feature-rich document management solution designed to be both powerful and cost effective.

Get more for less with SmartSearch

What makes SmartSearch unique is that it offers you much of the same functionality found in enterprise level solutions for less than a fraction of the cost. SmartSearch is

used extensively by many paper-intensive businesses – school systems, law offices, construction companies, physician practices, accounting firms, trucking companies, and mortgage or title agencies - any business looking for a cost-effective way to eliminate their paper-based filing system.

Benefits of SmartSearch:

- *SmartSearch is easy to afford*
- *SmartSearch is feature rich*
- *SmartSearch is easy to learn and use*
- *SmartSearch is compatible with any network connected copier or scanner*

Increase efficiency by turning your Multifunctional Copier into a Document Command Center.

Leverage your investment in office equipment by linking SmartSearch to your network connected copier. If your copier isn't network connected, not to worry, SmartSearch connects to any device that can scan to the network. This empowers you to work with virtually any scanner from any manufacturer.

With SmartSearch, you will never have to "drill down" into directories to locate scanned documents. SmartSearch starts by archiving your scanned documents anywhere on the network including offline or near line storage. SmartSearch then leverages the power of a Microsoft SQL Server database to locate your files based on the search criteria you define.

"We simply enter the matter number or client name into SmartSearch and the document is available immediately. I just print out the pages I need and I'm finished."

- Law office of Brady, McGuire and Steinberg

"The result was a dramatic decrease in retrieval time from 5 to 25 minutes down to just a few seconds. SmartSearch really works well with what we do."

- Cherry Hill Construction Co

Built on industry standards to help you build your business.

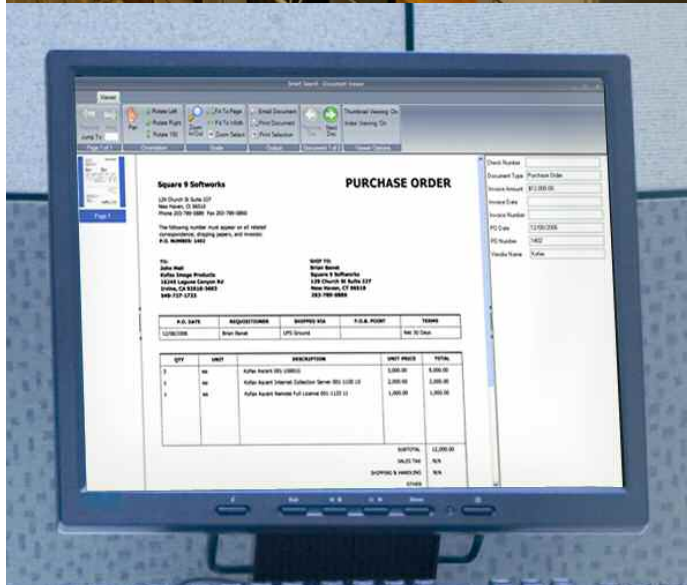

In addition to its cost effective price point and robust functionality, SmartSearch delivers power and flexibility by embracing open architecture, industry standards, and state-of-the-art technologies such as:

- Active Directory Integration
- Microsoft SQL Server database engine
- PDF and TIFF format support
- Built on the .NET platform using Service Oriented Architecture (SOA)

Equally important, SmartSearch is a scalable platform that can grow right along with your business.

SmartSearch, the document management solution you want and need.
