

Eliminate Late Payment Fees and Maximize Early Pay Discounts

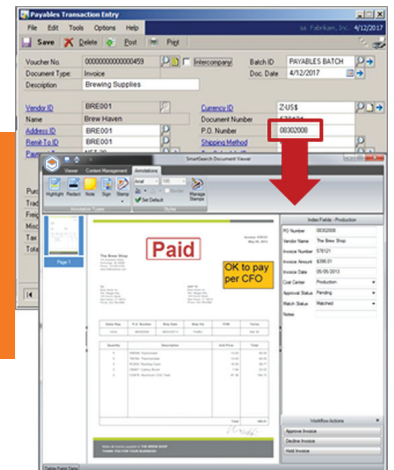

Integrate Microsoft Dynamics with GlobalSearch ECM to provide a fast and easy way to manage accounting documents while streamlining decision making processes.

Features & Benefits

- ✓ Extract invoice data and automatically push it to a Microsoft Dynamics voucher
- ✓ Bind Microsoft Dynamics data to GlobalSearch, synchronizing vendor and general ledger codes
- ✓ Automate document approval workflows, email notifications and escalation events
- ✓ Access documents stored in GlobalSearch directly from Microsoft Dynamics screens
- ✓ Avoid administrative hiring by making current staff more efficient
- ✓ Increase information accuracy and eliminate repetitive data entry
- ✓ Prove transaction validity with instant access to supporting documents
- ✓ Gain immediate and accurate visibility into document approval cycles
- ✓ Eliminate late fees and take advantage of early pay discounts
- ✓ Implement checks and balances for escalations

Integrating GlobalSearch with Microsoft Dynamics GP allows for the effective communication of invoice information using GP Web Services.

With this unique integration, users gain immediate access and visibility into accounting related document approval cycles.

How it Works

Extract Information

Invoice data such as Vendor ID, Invoice Number, Date, Amount, or line item information can be extracted and stored with the image directly into the GlobalSearch database.

Validation

Ensure Vendor ID and General Ledger (GL) accounts are correct by automatically populating data into GlobalSearch where drop down pick lists are created, allowing users to easily select the appropriate Vendor ID and apply header or line item GL codes.

Database Lookups

Instead of manually typing all index values, enter one key piece of data, such as a PO Number, and GlobalSearch will automatically query Microsoft Dynamics to return all matching index values such as Vendor Name, Invoice Date, Amount and GL codes.

Push Data

When data is ready for push, i.e upon approval of an invoice in a GlobalSearch workflow, the integration connector will create a new Payables Batch for the completed document(s).

Create Vouchers

A voucher in Microsoft Dynamics is then created for each document transaction pushed from data stored in GlobalSearch, which in return, eliminates manual key entry and produces significant time savings.

Retrieve & Collaborate

Initiate document retrieval directly from Microsoft Dynamics using GlobalSearch's Image XChange, which will extract selected data and pass it to a search. From there, displayed documents can be annotated, signed, shared or pushed to a workflow for instant approval.
